

Global Health Research

France, the Netherlands and Belgium present an online networking event on 17 June at 9:00 to explore new collaboration opportunities between French, Dutch and Belgian actors of global health research.

ORGANIZED BY

WITH THE SUPPORT OF

France, the Netherlands and Belgium, are working closely together in the field of research.

Campus France, the Institut français des Pays-Bas, the French Embassy in Belgium, the Research Department of the Public Service of Wallonia, in partnership with the Economic Faculty association Rotterdam (EFR) and Medical faculty Association Rotterdam (MFVR) present an online networking event on 17 June 2021 from 9:00 to 12:30 in English.

The event will focus on stimulating the development of new partnerships between French, Dutch, and Belgian research institutions, universities, companies, and knowledge clusters active in the field of global health, as well as promoting existing cooperation tools such as the Hubert Curien Partnerships, and encouraging partners to project themselves at the European level.

The program includes pitching videos in which participating institutions looking for new partners present their scientific projects and activities. Participants can find these videos and information about the participating institutions and projects in a special expo space, which will be open prior to the event.

In parallel with the pitching videos and the visit to the expo space, the actual focus of the event will be on B2B sessions that will put participants in direct contact with colleagues based on common interests.

New Horizon Europe call for projects will be discussed:

- Staying healthy in a rapidly changing society.
- Living and working in a healthy environment.
- Fighting disease and reducing its impact.
- Ensuring access to innovative, sustainable and quality health care.
- Reveal the full potential of new digital tools, technologies and solutions for a healthy society.
- Maintain an innovative, sustainable and globally competitive healthcare industry
